

PROOF OF WORK — ANDRE “DREY” THOMAS

Four production systems, shipped solo, live today. · contra.com/andre_thomas_sczm465o

Dottie — AI Phone Assistant

An AI that answers a real phone line in a natural voice, books meetings, and texts people back.

PROBLEM Businesses miss calls and lose leads. Nobody can answer every call, around the clock.

BUILT

A full voice agent on its own number: natural conversation, live booking, follow-up texts, and memory that recalls the caller next time. Guardrails keep it from spamming or looping.

1BB — AI Content SaaS

A full SaaS that turns one button into a running content operation.

PROBLEM

Solo founders and small teams can't keep up with content. The tools are scattered and the work is manual.

BUILT

End-to-end SaaS: a member dashboard, Stripe billing, and an AI content pipeline that runs on its own. Live with real paying users.

Pocket Drey — AI Clone

An AI clone that gives advice in my own voice.

PROBLEM I can't be in every conversation. People want answers when I'm not around.

BUILT

A chat clone trained on how I think and talk, with cross-session memory, deployed on its own domain. Ask it something and it answers like me.

Life Dashboard — Personal OS

A real-time dashboard that pulls every system I run into one live view.

PROBLEM

My data — sleep, training, focus, money — lived in ten different apps. No single source of truth.

BUILT

One operating view that pulls each system in real time, behind private auth. The control room for everything I run.
